Education

Bowen University Osun State, Iwo
Bachelor of Science in Software Engineering *Oct. 2021*

Experience

Mobile App Intern March 2024 – August 2024
National Information Technology Development Agency(NITDA) National Center for Artificial Intelligence and Robotics

- Developed a Mobile App for a startup using React Native for finding nearest fuel stations, with their prices in real-time
- Developed a Mobile App for a startup using React Native for monitoring and controlling home appliances
- Developed a mini-smart home application with React Native for controlling LED's, doors and LCD's using the ESP32 microcontroller
- Implemented MQTT communication protocol to communicate with a custom distribution box for monitoring and control of devices using Internet of Things

Google Developer Groups Mobile Application Technical Lead November 2024 – Present
Google Developer Groups on Campus *Bowen University*

- Tutored Novices in the tech field, that were interested in mobile app development
- Hosted a webinar and invited a seasoned software engineer to talk to the students

Mobile Application Developer June. 2024 – Present
Remote-Startup *Abuja*

- Developed a Mobile application for small businesses, in order to enable distribution of their products more effective and efficient

Projects

FindFuel | *React Native, ReactJs, Expo, Git* June 2024 – Present

- Worked at a startup to develop a Mobile application aimed at making navigation of fuel stations seamless, as well as providing users with the real-time prices of the fuel stations
- Developed the product website, as well as the waitlist for the users

IoT-Enabled Biomteric Attendance System | *C++(Arduino IDE), PHP, MySQL* November 2024 – June 2024

- Implemented a biometric attendance system using the ESP8266 microcontroller, R307 fingerprint sensor, OLED, 3.7v lithium battery and a PVC(Polyvinyl Chloride) box

Lightly | *React Native, ReactJS, Typescript, Git* July 2024 – December 2024

- Worked with a startup team to develop a mobile application for monitoring and controlling home appliances
- Implemented authentication using firebase as the serverless backend
- Implemented MQTT communication protocol to communicate with the distribution box

Davkart | *React Native, Expo, Typescript, Git* June 2024 – Present

- Developed a Mobile application for small businesses, in order to enable distribution of their products more effective and efficient
- Implemented both the seller and buyer flows for the sellers and the customers

Technical Skills

Languages: Java, Python, Typescript, HTML/CSS
Frameworks: React, React Native, Spring Boot
Developer Tools: Git, Docker, Postman, VS Code, Visual Studio, PyCharm, IntelliJ, Figma, Vercel
Libraries: Redux Toolkit
