Work Experience

Mobile App Intern March 2024 – August 2024
National Information Technology Development Agency (NITDA), National Center for Artificial Intelligence and Robotics

- Built consumer React Native apps including a location-based fuel finder with MapView and MapViewDirections to display nearest stations, routing context and real-time pricing.
- Improved UX by integrating Google Places Autocomplete, resolving map click-through issues, and implementing a BottomSheet-driven station details interface.
- Managed client state with Redux Toolkit (selected station, history, favourites), and optimized performance via marker clustering, FlatList improvements and map preloading.
- Prototyped IoT integrations (ESP32) using MQTT (Mosquitto/Paho) for device control, implemented onboarding/permission flows, tightened TypeScript types, and collaborated on Expo→bare workflow planning.

Google Developer Groups — Mobile Application Technical Lead November 2024 – Present
Google Developer Groups on Campus

- Lead curriculum and hands-on workshops aimed at onboarding novice developers into mobile development, designing practical exercises and review sessions to accelerate learning and ensure participants could apply concepts to real projects.
- Organized and hosted technical webinars featuring experienced software engineers, facilitating knowledge transfer on mobile best practices, career guidance, and modern toolchains while coordinating event logistics and post-event resources for attendees.
- Mentored junior members through code reviews and project guidance, encouraging good engineering practices (component design, state management, and TypeScript adoption) and helping mentees ship small production-ready features.

Mobile Application Developer June 2024 – Present
Davkart

- Designed and implemented a mobile solution to help small businesses distribute products more effectively by building intuitive product listing and order workflows, focusing on performance and usability for low-bandwidth environments and ensuring seamless synchronization with backend APIs.
- Worked across the full mobile stack — from UI/UX interactions and offline-aware features to API integration and client-side state — to deliver a polished product that reduced friction in the merchants' distribution process.

Mobile Application Developer July 2025 – Present
Sqoolr

- Contributed as a core mobile developer to a School Management System, implementing the student management module (CRUD operations, client-side validation, and data synchronization with server endpoints) and ensuring data integrity for student and staff records.
- Led a reconfiguration of the admin onboarding flow to streamline account setup and role-based access, improving first-time user conversion and reducing manual configuration steps for administrators.
- Collaborated within an agile team to integrate features, debug TypeScript and runtime issues, and optimize list-heavy screens to maintain responsiveness on a range of devices.

Certifications & Awards

Google Developer Groups — Mobile App Development Lead (Certification of Appreciation) | Leadership, Mobile Curriculum, Mentoring Jul 2025
Digital Bridge Institute — Backend Web Programming (PHP & MySQL) | Backend fundamentals, PHP & MySQL Oct 2023
Techathon — Award for Excellence (Web Development) | Competition winner, web-development Dec 2023

Education

Bowen University, Osun State, Iwo
Bachelor of Science in Software Engineering Oct. 2021

Projects

FindFuel | React Native, React, Expo Jun 2024 – Present

- Mobile fuel-finder that surfaces nearest stations, routing context and live pricing; built the mobile app and product website, designed user onboarding and waitlist flows to improve early-adopter signups.

TaskNest | React Native, Supabase Personal Project

- Sole developer of a lightweight task-management mobile app using React Native with Supabase backend for auth and realtime sync; implemented offline-aware data sync, user authentication, and clean task CRUD flows to support productive mobile usage.

Student Advisory System | Next.js (frontend) | Spring Boot (backend) University Project

- Worked on the Next.js frontend that integrates with a Spring Boot API to manage student records, advisories, and notification workflows; implemented responsive UI, client-side validation, secure API consumption, and smooth data synchronization with the backend.

Lightly | React Native, TypeScript, MQTT, Firebase Jul 2024 – Dec 2024

- Built mobile interface and device-control flows for a smart-home product using Firebase auth and MQTT (distribution box) to relay commands and telemetry; focused on reliable device state, secure auth, and intuitive control UX.

Davkart | React Native, Expo, TypeScript Jun 2024 – Present

- Marketplace app for small-business distribution supporting seller and buyer flows; implemented product listing, order workflows and client-side syncing to enhance merchant usability in low-bandwidth conditions.

IoT Biometric Attendance | ESP8266, C++, PHP, MySQL Nov 2023 – Jun 2024

- Built a standalone biometric attendance device using ESP8266 and R307 fingerprint sensor with OLED UI; handled local storage, server sync and a lightweight PHP/MySQL backend for attendance logging.

Technical Skills

Languages	Java (OOP, Spring Boot), Python (scripting/data), TypeScript (React/React Native), JavaScript (ES6+), Dart (Flutter), HTML & CSS (responsive)
Frameworks & Libraries	React, React Native, Next.js, Flutter, Spring Boot; Redux Toolkit, React Query
Mobile / Frontend	Expo, React Navigation, MapView / MapViewDirections, Google Places Autocomplete, Reanimated
Backend & BaaS	Spring Boot (REST APIs), Firebase (Auth/Realtime/Firestore), Supabase (Auth/Postgres/realtime)
Databases	PostgreSQL, MySQL, NoSQL (practical experience)
Dev Tools & CI/CD	Git, Docker, Postman, Vercel, GitHub Actions, VS Code, IntelliJ, PyCharm
IoT & Messaging	ESP32 / ESP8266, Arduino (C/C++), MQTT (Mosquitto, Paho)
Design & Workflow	Figma, responsive UI, Agile / Scrum, code reviews and mentoring
